Subject: Evergreen Manor

Superfund Site

Hello,

My name is Karrie Rosencrance & my husband & I live at Lane in Roscoe, IL. Our home borders the homes listed in the Evergreen Manor Superfund site & I guess I'm quite concerned how the contamination effects our water supply being that we are still on well water.

We have lived here over 10 years & in that 10 yrs our water has never been tested as far as I know, so if the house next to me & the land behind our house (which our land butts up against) has been listed as contaminated & my water has not been tested I how do I know that our water is not contaminated.

Unfortunately due to my work hours I was unable to attend the information session that you had at the library. I would just like to suggest that included in the proposed \$8.5 million clean up plan is a plan that would include periodically testing not only the homes included in the site but also homes bordering the site, in case the contamination has spread.

I realize that city water hookup is now available for us but unfortunately in today's economy we just cannot not afford the cost of the hookup.

If you would please just consider my suggestion & let me know if any of the water in our immediate neighborhood of Rollingsford Lane as been tested, it would be greatly appreciated.

Thanks for your time & consideration regarding this matter.

Sincerely,  
Karrie Rosencrance
